

OutSpot Implementation Status

OutSpot Challenge System — Implementation Status

Reference document: *Daily Challenge Ideas* PDF (launch spec) **Status as of:** June 7, 2026

Important Context (Read This First)

The OutSpot app currently has two challenge surfaces in the UI:

- A **Daily Challenge card**
- A **Weekly Challenge card**

Every implemented item below is wired into the existing daily/weekly card system. **The app will not show any other challenge category as a separate screen** — weekend, seasonal, bonus, health, and brand-named challenges all rotate through the same two card slots, just filtered by date or theme. Adding more backend challenge types (such as friend or group challenges) will not show up to the user until new app screens are built for them.

IMPLEMENTED (Live in Backend)

1. Challenge Content — 287 challenges seeded into the database

- 100 daily challenge ideas — food, coffee, views, city exploration, art, fitness, solo-social, shopping
- 40 weekly multi-stop challenges — visit multiple places, submit multiple photos
- 14 weekend-only challenges — automatically only appear on Saturday and Sunday
- 40 seasonal challenges (10 per season) — auto-rotate based on the current date
- 15 higher-value bonus weekly challenges worth 25 points
- 19 brand-named flavor challenges (Breakfast Blitz, Sunset Snap-Off, Hidden Gem Hunt, Coffee Crawl, Sweet Spot, etc.)
- 45 health and wellness daily challenges (20 daily health + 15 fitness/movement + 10 mental health)

- 15 weekly health challenges (3-Day Walk Streak, Wellness Tour, Hydration Hero, etc.)

2. Smart Scheduling

- Server timezone is set to Boston so daily/weekly resets align with your launch market
- Weekend-only challenges automatically appear only on Saturdays and Sundays
- Seasonal challenges automatically swap based on current month (Summer Jun–Aug, Fall Sep–Nov, Winter Dec–Feb, Spring Mar–May)
- Each user gets their own daily challenge per day — refreshing the app shows the same challenge (prevents reroll-cheating)
- Each user gets their own weekly challenge per week (Monday reset)

3. Points and Rewards — Exactly as Specified

- Place price level → points: \$ = 10, \$\$ = 20, \$\$\$ = 35, \$\$\$\$ = 50
- Free places (parks, murals, views, trails) award 5–15 points based on Google popularity
- Difficulty levels: Easy = 10, Medium = 15, Hard = 20, Multi-step = 25
- Every seeded challenge has the correct point value per spec
- **Points multiplier support** — when a user purchases a multiplier (1.5×, 2×, 3×), every reward (check-ins and challenge completions) is multiplied for the duration. Verified end-to-end.

4. Leaderboard System

- Weekly leaderboard data endpoint already exists and is used by the app
- Leaderboard screen is implemented in the Flutter app
- Submissions feed the leaderboard ranking automatically

5. Notifications — All Major Triggers Live

- **Daily challenge assigned** — push goes out at midnight (Boston) when a new daily window opens with the user's challenge title and description
- **Weekly challenge assigned** — push goes out at midnight every Sunday (Boston) when a new weekly window opens
- **Daily challenge reminder** — push at 8:00 PM (Boston) every day, sent only to users who haven't completed today's challenge. Skipped if they already finished or were already reminded.
- **Weekly challenge reminder** — push at 6:00 PM (Boston) every Saturday for users who haven't finished the weekly challenge
- **Leaderboard mid-week push** — Wednesday 6:00 PM (Boston). Personalized for each user based on their current rank:
 - Rank 1: "👑 You are #1 — hold the crown"
 - Rank 2–3: "🏆 You are on the podium"

- Rank 4–10: “🏆 In the Top 10 club — podium is one good evening away”
- Rank 11–50: “🇮🇹 You are climbing — Top 10 is closer than it looks”
- Rank 51+: “🚀 Start climbing — a few popular spots can crack Top 50”
- **Leaderboard final-day push** — Sunday 10:00 AM (Boston) with urgency framing for the final day of the week’s prize window
- **Friend request notification** — already implemented from previous work
- **Multiple hook variants per category** — each notification has 3–5 different title/body templates so users don’t see the same wording every day. The variant is picked deterministically by user + day so behavior is reproducible.
- **Idempotency** — the same user cannot receive the same reminder type twice in the same window (no spam)
- **User control respected** — users who disable notifications never receive pushes, but in-app records are still saved

6. Anti-Spam and Safety

- 1-hour cooldown on “submit for points” — user can only submit once every 60 minutes
- People-related challenge wording rewritten per the document (“show a public activity” instead of asking users to photograph strangers)
- GPS check-in is validated against Google’s place location plus Google viewport — prevents fake check-ins from another city

✗ NOT IMPLEMENTED (Needs New Flutter UI Work)

Friend Challenges — Approximately 80 Items From The Document

These cannot work with the existing two-card UI. Each requires a new invite, accept, and joint-submission flow.

- **Simple Friend Challenges** — Coffee With A Friend, Lunch Duo, Two-Person Walk, Friendship Selfie Spot, Dessert Duo, Try Something New Together, Matching Drinks, Snack Swap, Bestie Brunch, Cafe Catch-Up, Study Buddy Spot, Friend Date Night, Photo Swap, Hidden Gem Together
- **Active Friend Challenges** — Walk & Talk, Gym Buddy, Run Partner, Bike Buddy, Park Workout Pair, Stretch Together, Healthy Meal Duo, Smoothie Pair, Step Challenge, Sunset Walk Duo, Active Hour, Friend Fitness Class, Outdoor Game Day, Trail Buddy
- **Competitive Friend Challenges** — Best Photo Wins, Food Pick Battle, Coffee Shop Face-Off, Dessert Battle, Best View Battle, Healthy Bowl Battle, Step Count Showdown, Spot Race, Photo

Angle Challenge, Friend's Choice Challenge (these need a voting and comparison UI)

- **Group Challenges** — Squad Brunch, Group Walk, Picnic Crew, Game Night Spot, Team Workout, Food Crawl Crew, Cafe Crawl Crew, Squad Sunset, Friend Group Landmark, Weekend Recap (these need 3+ user coordination)
- **Friend Combo Challenges** — Walk To Brunch, Workout Then Smoothie, Park & Picnic, Friend Wellness Day, Sunset Steps, Healthy Food Crawl with friend, Hydration Duo, Outdoor Reset, Trail & Treat, Gym Buddy Bonus, Active City Tour, Two-Park Challenge, Mindful Meetup, Healthy Swap Duo, Steps Before Sweets

All of these require a brand-new “invite a friend to a challenge” flow in the Flutter app.

Meta / Special Challenge

- **“Spot Snap Win Challenge”** (complete any 3 challenges in one day) — needs a cross-challenge progress tracker in the app

Naming Alternatives (Depend On Above)

- The document's *Better Challenge Names For The App* list (20 names like Wellness Walk, Friend Fit Quest, Buddy Battle) — these are rename suggestions for the friend-challenge features above, so they go live when those features go live

TL;DR

- **Approximately 75% of the document is live and working** — all solo daily, weekly, seasonal, weekend, health, and bonus challenges + the points table + points multiplier + 1-hour cooldown + Boston timezone + the full notification system (daily/weekly assigned, daily/weekly reminders, leaderboard mid-week, leaderboard final day, friend requests).
- **Approximately 25% is friend-related and group-based** — these still need new Flutter app screens (invite flow, voting, group coordination) before the backend can be hooked up.
- **Reminder for the client:** even the implemented backend categories all surface inside the existing Daily and Weekly cards. No new “Weekend” or “Seasonal” tab exists in the app — they just rotate into the same two slots when their date matches. Notifications appear in the system tray as normal.
